

## INFO603 Practical project documentation template (Engineering journal)

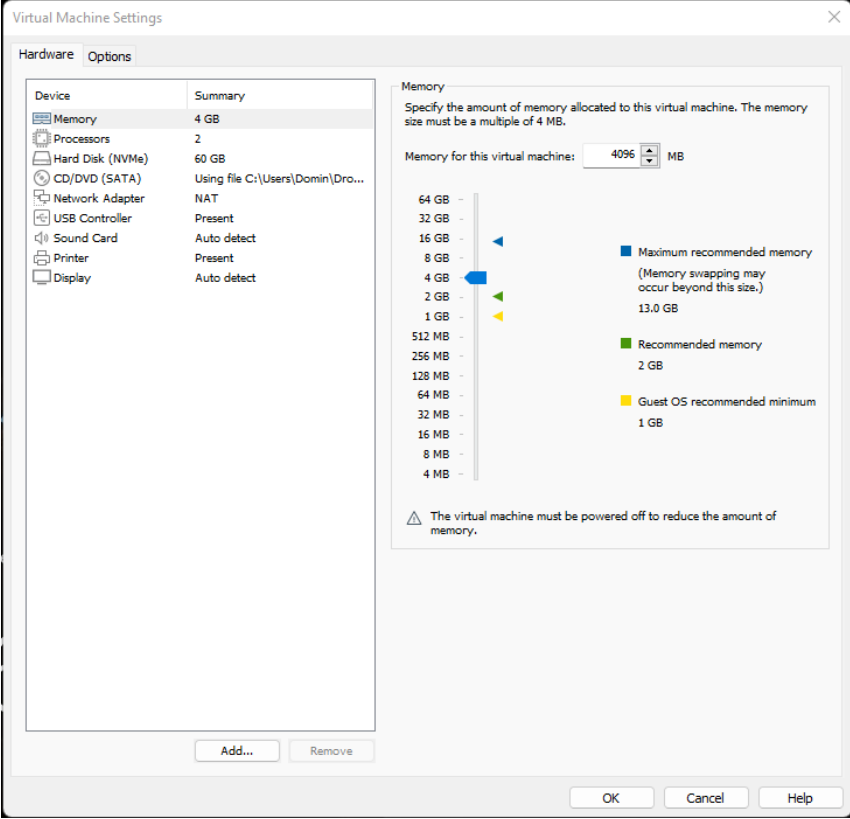

**Section number: One**

**Student name: Dominic Nathan**

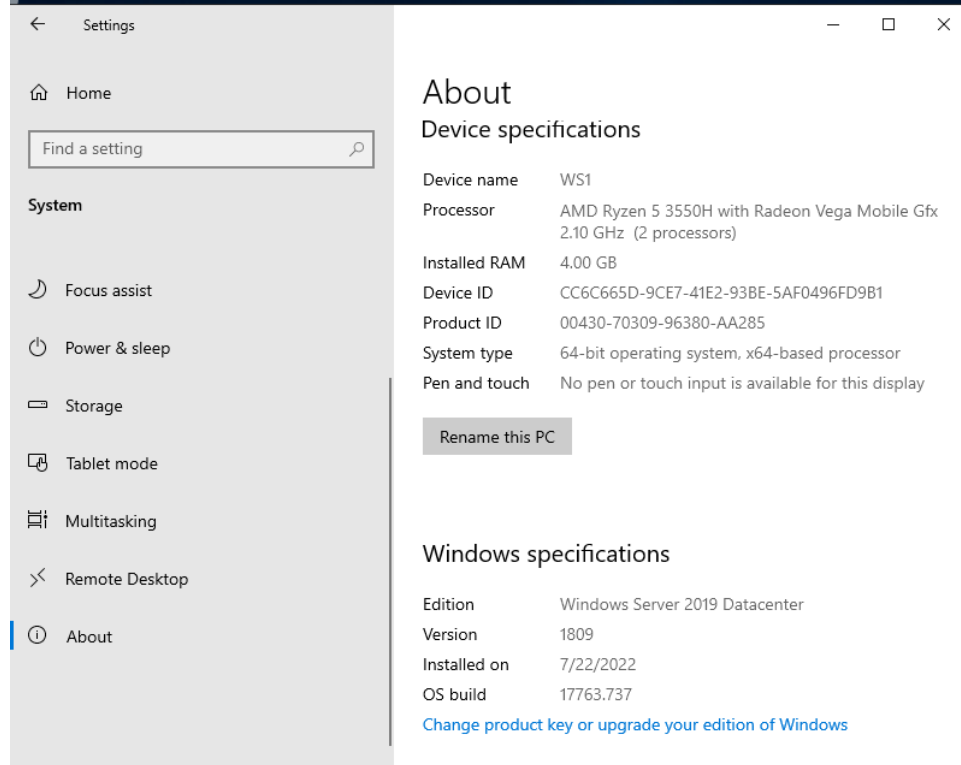

When doing practical work it is common practice and extremely useful to document the steps you took. This assists you make your learning more tangible and organise it. The more detail you can provide the better it is so that if ever you want to configure it in the future you have a personal record documented.

The project book gives the main implementation steps. However this documentation report requires you document what you did at each implementation step as you are doing the practical project. It is not advised to do this at the end otherwise you are likely to forget what you did.

Please write this in your own words as it is a record of your work. Copied material is not accepted.

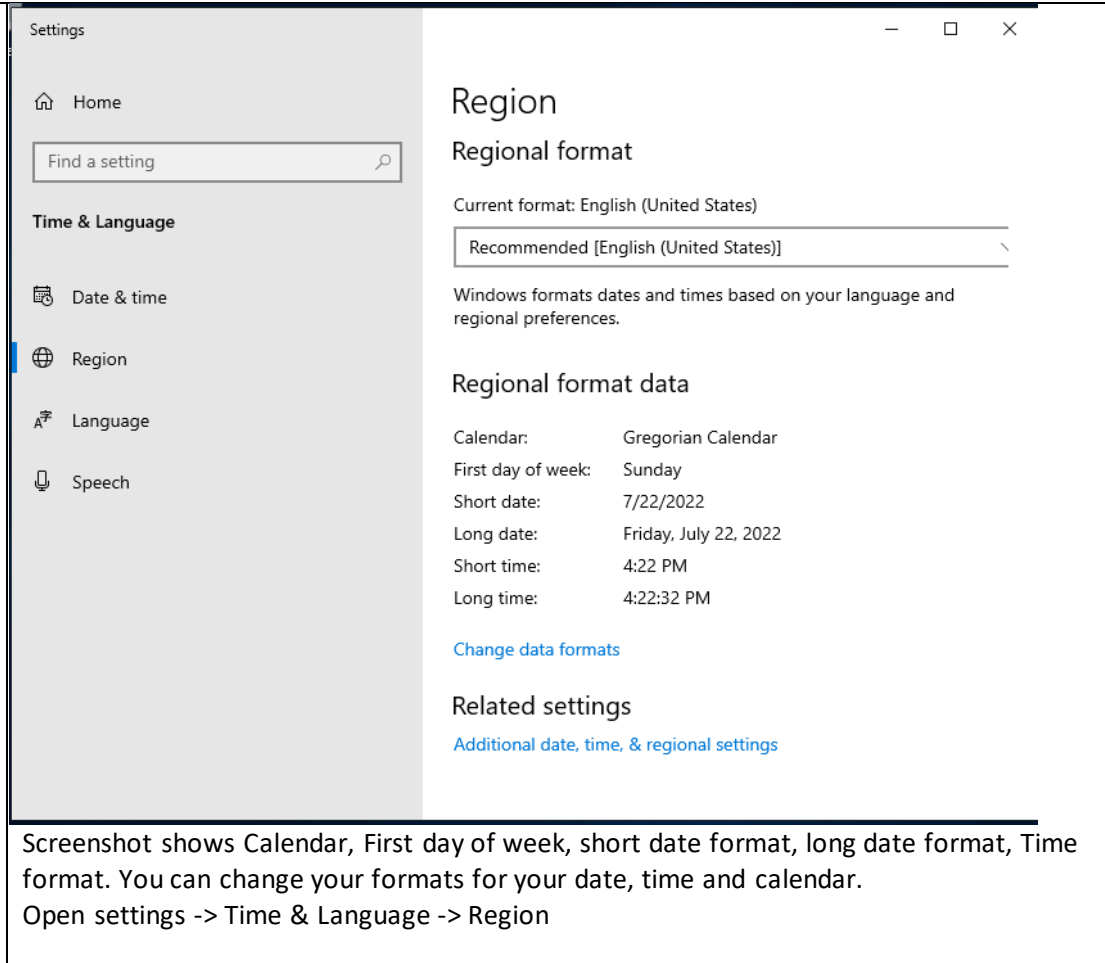

Section Summary	Implementation details at each step e.g. screenshots, written steps, value of settings, commands used, results, answers to questions etc where applicable.
Setting the RAM for the VM	<div></div> <p>Screenshot shows that the RAM for the virtual machine has been set to 4GB. The RAM must be set 4GB as it will affect how the Virtual Machine will run, if the RAM is set lower it will take longer for the server to load.</p> <p>VMware workstation-&gt;Edit menu-&gt; Memory -&gt; Move the blue slider to 4GB</p>

## Renaming Server

Screenshot shows that the name of the computer has been changed to “WS1”  
Open settings -> About -> Click Rename this PC

## Time & Region

The screenshot displays the Windows Settings application, specifically the 'Time & Language' section, with the 'Region' settings page selected. The left sidebar shows the navigation menu with 'Region' highlighted. The main content area is titled 'Region' and 'Regional format'. It shows the current format as 'English (United States)' and a recommended format of '[English (United States)]'. Below this, it states 'Windows formats dates and times based on your language and regional preferences.' The 'Regional format data' section lists the following settings: Calendar: Gregorian Calendar, First day of week: Sunday, Short date: 7/22/2022, Long date: Friday, July 22, 2022, Short time: 4:22 PM, and Long time: 4:22:32 PM. There is a link to 'Change data formats' and a section for 'Related settings' with a link to 'Additional date, time, & regional settings'.

### Region

#### Regional format

Current format: English (United States)

Recommended [English (United States)]

Windows formats dates and times based on your language and regional preferences.

#### Regional format data

Calendar:	Gregorian Calendar
First day of week:	Sunday
Short date:	7/22/2022
Long date:	Friday, July 22, 2022
Short time:	4:22 PM
Long time:	4:22:32 PM

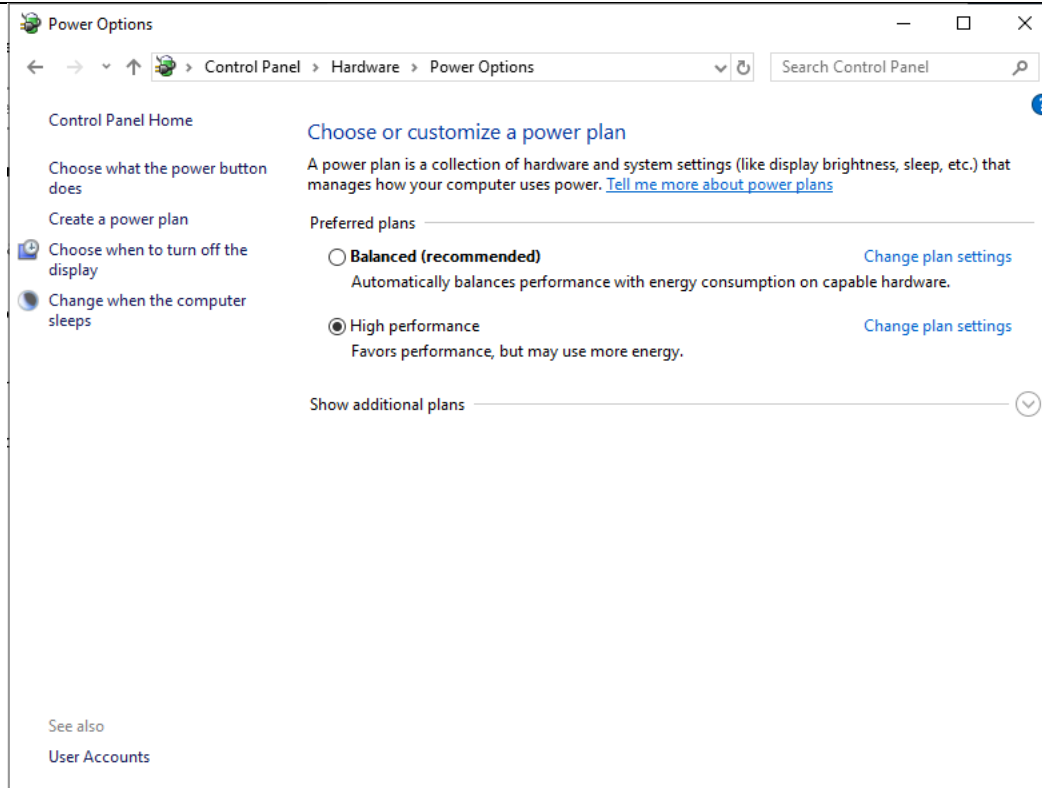

[Change data formats](#)

#### Related settings

[Additional date, time, & regional settings](#)

Screenshot shows Calendar, First day of week, short date format, long date format, Time format. You can change your formats for your date, time and calendar.  
Open settings -> Time & Language -> Region

## Power Options

Open Control Panel -> Hardware -> Power Options -> Select High Performance  
Changing the power options can be useful depending on what you use your computer for, if you need more CPU power changing it to high performance will benefit you.

IPv4  
address

Internet Protocol Version 4 (TCP/IPv4) Properties

General

You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.

☐ Obtain an IP address automatically

☒ Use the following IP address:

IP address: 192 . 168 . 6 . 20

Subnet mask: 255 . 255 . 255 . 0

Default gateway: . . . .

☐ Obtain DNS server address automatically

☒ Use the following DNS server addresses:

Preferred DNS server: 192 . 168 . 6 . 20

Alternate DNS server: 192 . 168 . 6 . 18

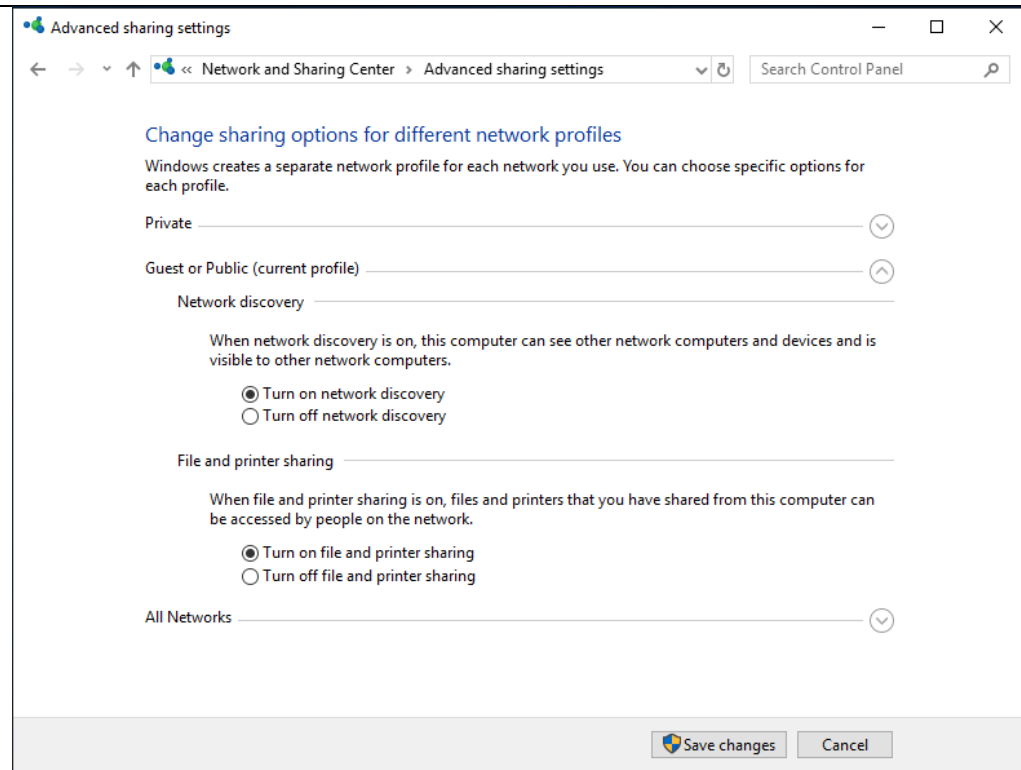

☐ Validate settings upon exit

Advanced...

OK Cancel

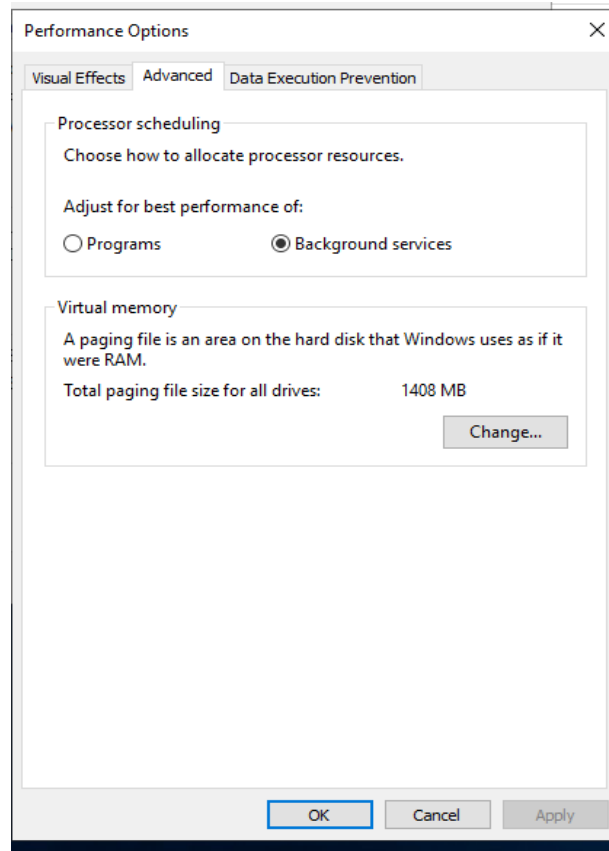

Open settings -> Network & Internet -> Advanced network settings -> change adapter options -> right click ethernet -> Select Properties -> Click IPV4 -> Select Properties -> Select the Use the following IP address -> Enter IP address, subnet, and DNS servers.

This is very useful to use especially if you want to manually configure your IP address and DNS servers.

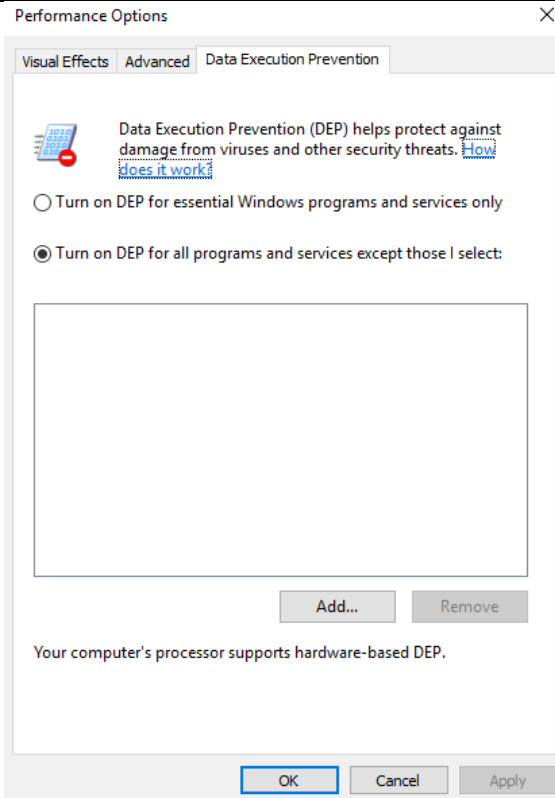

Control Panel -> Network and Internet -> Network and Sharing Center -> Advanced sharing settings -> Select "Turn on network discovery" and "Turn on File sharing"  
This allows users to share files and see other devices on the same network. This is very useful for entities that share resources.

## Performance Options

Open Control Panel ->System ->In the window that opens, choose Advanced system settings ->click the Advanced tab -> In the Performance section, click the Settings button -> In the Performance Options window that opens, -> click the Advanced tab.

## Data Execution Prevention

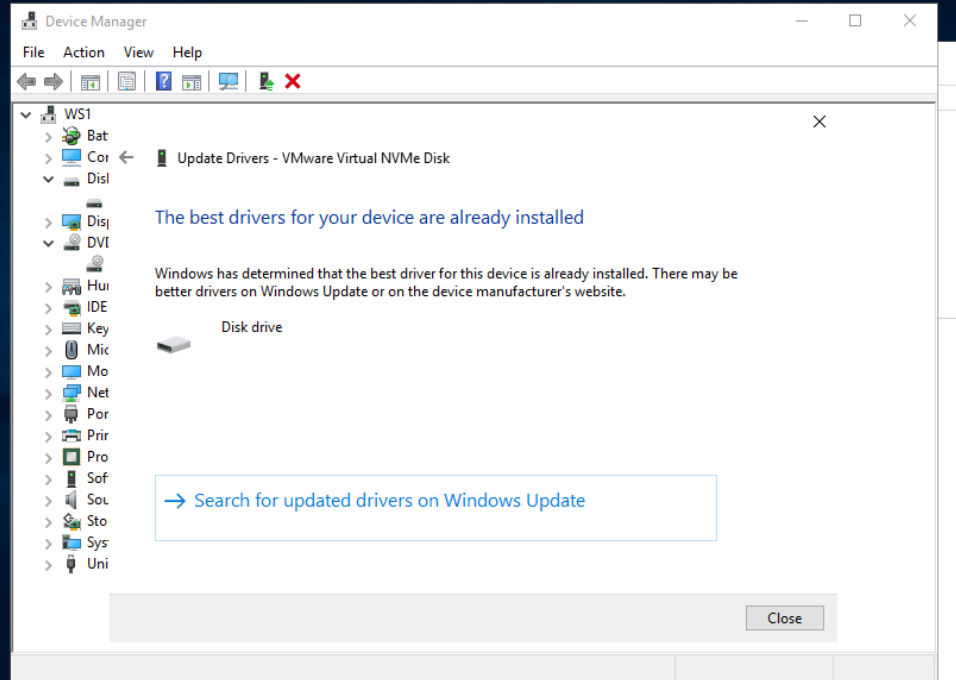

Open Control Panel ->System ->In the window that opens, choose Advanced system settings ->click the Advanced tab -> In the Performance section, click the Settings button -> In the Performance Options window that opens, -> click the Data Execution Prevention tab.

Helps protect against virus and other security threats.

## Updating Drivers

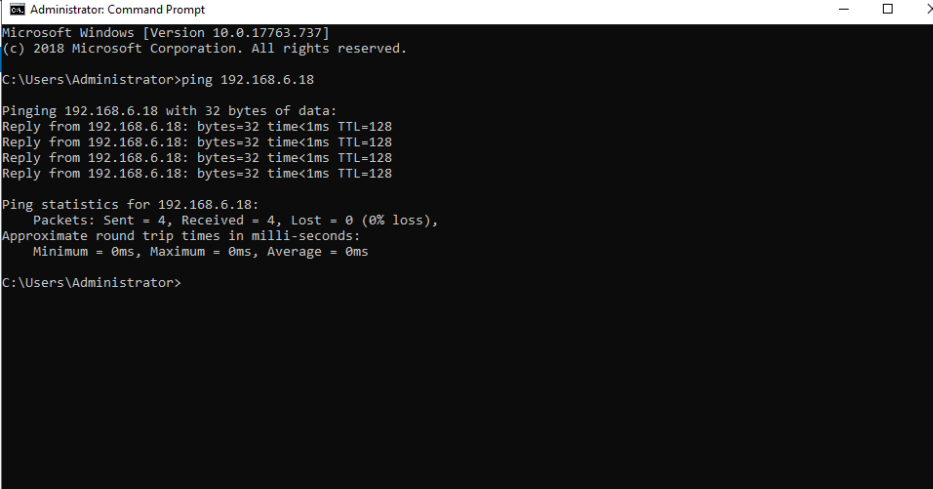

Open Device manager -> Select the component you wish to update e.g. disk drives -> right component -> click check for update.  
This will either update the driver or tell the user that there driver is up to date as shown in the screenshot above.

## Setting HKEY\_CLASSES\_ROOT to audio

Open Registry editor -> Select HKEY\_CLASSES\_ROOT -> Select .ac3 -> Select default -> move mouse to Data column -> change it to audio

Connectivity test	 <p>Administrator: Command Prompt</p> <pre> Microsoft Windows [Version 10.0.17763.737] (c) 2018 Microsoft Corporation. All rights reserved.
